

How to Get the Best Results from AllerPops

(US Pat No. 9,795,579)

How to Use:

For the best results:

Start about an hour before a meal, follow these four steps, once every other day, until your symptoms disappear:

1. Brush your teeth with water (no toothpaste).
2. Scrub your tongue with a warm wet washcloth from the back to the front until most of the white/yellow biofilm on the top is gone.
3. Gargle hot (optimal 120 °F) water for about 10-20 seconds. Spit out and repeat gargling for five minutes. Your tongue should be red without any biofilm. If it isn't, scrub it with the wet washcloth and gargle one more time.
4. Eat one AllerPop while doing your favorite things. Let the lollipop slowly melt in your mouth. Do not chew the lollipop or swallow it whole. It may take up to an hour.

Simple method:

This method is for children and other people who cannot gargle properly.

- Eat a few AllerPops every day, while having a hot beverage or after brushing your teeth.

(Please note) This method may take weeks or even months to reach a sustained relief and you will wind up buying many boxes of AllerPops.

Before you get started:

- **We've included:** 12 AllerPops Prebiotic Lollipops.
- **You may need:** a food thermometer, washcloth, water jar or pitcher.
- Check the ingredients lists on the back of the package to see if you are allergic to any of them.
- **Choking hazard!** Adults should supervise any use by children under three years old.

Is Your Oral Hygiene Too Extreme?

Many people want to brush their teeth and tongue to kill all the germs that cause bad breath. But using toothpaste with antibiotics (such as triclosan) and practicing excessive oral hygiene kills off the friendly bacteria that keep your allergies under control and that have been with humans for millions of years. It will also reduce the

effectiveness of this kit. We recommend brushing your teeth once a day using toothpaste without antibiotics.

What to Expect:

AllerPops prebiotic Lollipops bring your immune system back to its natural state – where it will no longer be so sensitive to the allergens in the air. AllerPops promotes a probiotic-friendly environment in your mouth and the resulting bacterial community in the oral cavity is generally stable and yields long-lasting relief from allergies.*

Depending on how well the targeted bacteria responds to the prebiotic, it may take several (seasonal allergies) to more than ten (year-long allergies) days to get relief. If your symptoms have persisted for a long time, you may not feel a big difference within the first ten or more days. In most cases, one box of AllerPops should be enough. In some situations, you may need to buy an additional box if you've observed progress but haven't had complete relief.

It's not necessary to continue using AllerPops Prebiotic Lollipops after you've reached the desired results. We don't recommend using AllerPops long-term, as over-pacified immune systems can increase the odds of other health problems. If the allergies come back (for example, after you've taken antibiotics) then simply retake them.

Please contact us at knozejr.com if you have any questions.

Dear Customer,

Thank you for choosing AllerPops (Knoze Jr) Prebiotic Lollipops. I appreciate your business and am quite sure that AllerPops will serve you well.

Unlike most allergy medications, you don't have to keep buying them over and over again, throwing your money out the window. AllerPops are so **effective** that people don't have to come back for more, **because their allergies are gone**.

Which is a problem for us!

They work so well that we can't rely on repeat business.

That's why we need your help reaching out to more people who are suffering from allergies and searching for a way to feel better.

We're collecting stories from our customers, and you can get paid to participate.

The program is brand new. You're one of the first people to hear about it.

I invite you to kickstart the program. It's easy!

All you have to do is take a video of yourself describing your allergy symptoms before taking AllerPops. Then take a video of yourself while eating the AllerPop. Finally, create a video of yourself after taking it telling us about the results. Post the video/photo/text on Facebook, Twitter, or Instagram using the hashtags

#iTuneMyAllergiesUsingAllerPops and **#allergies**.

The first 5 participants will get a gift of \$20. Everyone else will receive a thank you gift of \$5.

Find out all the details on our website at **knozejr.com/share-your-experience/**.

Your honest feedback is appreciated. If you're satisfied (or even if you're not satisfied or have questions or concerns) we want to hear from you.

Best Regards,

Cliff S. Han
Knoze Jr Corp

P.S. Again, I am grateful for your purchase and appreciate your help reaching out to people who struggle with allergy symptoms.

Raise a Child Allergy-free

Seed the child's microbial communities with ones from mother, father, and sibling, NOT with ones from dog or cat or environment...

1. Give birth naturally.
2. Confine baby with mother ideally for a month, (minimum one week). Traditionally in China, a baby is confined for the first 100 days and along with the mother for the first month.
3. Breastfeed.
4. Sleep with the baby in the same bed.
5. Don't bathe in the first week, (wiping gently with wet cloth should be enough). Don't bathe too frequently afterward. Sweating is not a reason for a bath. Sweat produces conditions, such as high salt concentration, that promotes and sustains skin probiotics.
6. Adults should chew food first, then feed to baby for 2-3 months, adding the following foods in these sequences: Start with a starch-rich diet including water, porridge, semisolid and then solid food. Follow this with protein-rich foods including nuts and veggies. starch-rich diet first, then nuts, protein-rich, and veggies). Adult-chewed food is easy for baby to digest, prevent infection, and help establish oral and gut microbiota, which will likely prevent allergies. The caregiver should have no acute infection when doing mouth feeding.
7. Take AllerPops Prebiotic Lollipops **AFTER** finishing an antibiotics course.

Knoze Jr Health Principle for Adults

1. Tame your hunger and dance between fasting and satisfaction.
2. Nurture your probiotics and dance between nature and cleanness.
3. Revive physical work and dance between labor and rest.
4. Choose a destiny and dance between purpose and freedom.

Please consult with your physician before applying these principles.
